Open Internet Policy

WorldCallTel.com,Inc. (Collectively "WorldCallTel.com,Inc.")

WorldCallTel.com,Inc. supports the belief that the Internet is an open platform that enables consumer choice, freedom of expression, end-user control, competition and the freedom to innovate without permission. In the interests of preserving the foregoing, the following information regarding WorldCallTel.com,Inc.'s Internet services ("WorldCallTel.com,Inc. Services") and practices is provided
for the convenience of our current and prospective customers. Specifically, this policy and the information provided enable our end users to make informed choices regarding the use of such services and to understand the capabilities of broadband services.

This information is also provided for content, application, service, and device providers to develop, market, and maintain Internet offerings. WorldCallTel.com,Inc. Services are currently governed by its Acceptable Use Policy ("AUP"). WorldCallTel.com,Inc.'s AUP is available on its websites located at: WorldCallTel.com,Inc.-suite.com. This Open Internet Policy is used in conjunction with WorldCallTel.com,Inc.'s AUP. Nothing in this policy serves to change your rights and obligations, or ours, under any WorldCallTel.com,Inc. terms of service, AUP or policy.

Network Practices

Congestion Management: WorldCallTel.com,Inc. manages its network to ensure that all of its customers have a great online experience.
The Internet is changing all of our lives and we want our customers to enjoy all that it has to offer. For more than a decade, WorldCallTel.com,Inc. has been at the forefront of bringing the Internet into our customers' homes and has invested in a high- capacity advanced network that is fast, safe, reliable and affordable.

Like any other Internet service provider, we manage our network for many reasons including growing, upgrading and optimizing the network; removing spam, viruses and malicious content; and managing network traffic congestion when it occurs. While congestion is not the normal state of any network, when it happens, it can be frustrating.

Because WorldCallTel.com,Inc. values its customers' freedom to use the Internet and the WorldCallTel.com,Inc. Services, so long as an end user complies with the terms and conditions of WorldCallTel.com,Inc.'s AUP, WorldCallTel.com,Inc.'s will not actively manage any particular types of traffic. All traffic that is transmitted using the WorldCallTel.com,Inc. Services is treated equally and without unfair prejudice.

Examples of types of traffic that violate the WorldCallTel.com,Inc. AUP include but are not limited to data that:

- Is unlawful, threatening, abusive, harassing, libelous, defamatory, obscene, deceptive, fraudulent, invasive of another's privacy, tortious, indecent, pornographic or inaccurate.

- Victimizes, harasses, degrades, or intimidates an individual or group of individuals on the basis of religion, gender, sexual orientation, race, ethnicity, age, disability or any other reason

- Is posted in violation of a newsgroup charter

- Contains viruses, corrupted files, or any other similar software or programs that may damage the operation of another's computer

- Has a negative effect on WorldCallTel.com,Inc. or its network (including, without limitation, overloading servers on the WorldCallTel.com,Inc. Network; causing portions of the WorldCallTel.com,Inc. Network to be blocked by other network providers; generating unresolved third party complaints or complaints which, in the discretion of WorldCallTel.com,Inc., impose an unreasonable administrative burden on the company; etc.)

- Constitutes unsolicited duplicative e-mail (commercial or otherwise)

The occurrence of any of the above acts would cause WorldCallTel.com,Inc. to intervene and manage the end user's traffic. The above list is not exhaustive and an end user should refer to the WorldCallTel.com,Inc. AUP for a full list and description of all traffic and activities that are not permitted.

Application-Specific Behavior: There are certain times when a provider must block or ratecontrol specific protocols or protocol parts, modify protocol fields in ways not prescribed by the protocol standard, or otherwise inhibit or favor certain applications or classes of applications. As with our approach towards congestion management, so long as an end user complies with the terms and conditions of our AUP, WorldCallTel.com,Inc. will not block or rate-control any protocols or otherwise limit such applications in any way.

Device Attachment Rules: Certain providers find it necessary to either place restrictions on or create approval procedures for the types of devices that may connect to its network. WorldCallTel.com,Inc. takes a neutral stance on device attachment to our network and does not place any restrictions so long as our AUP is not violated.

Security: WorldCallTel.com,Inc. goes to great lengths to ensure end-user and network security. Those practices are set forth in detail in WorldCallTel.com,Inc.'s AUP.

Performance Characteristics

Service Description: Broadband Services is the WorldCallTel.com,Inc. offering of connectivity for VoIP customers who do not have a
broadband provider or need to upgrade their existing capacity. It is also for customers whose current connectivity cannot support VoIP/SIP Services. Regardless of current broadband type, WorldCallTel.com,Inc. ensures the SIP services are running optimally.
